As in the last two previous editions, the goal of the doctoral workshop in Economics, Business, Finance and Computer Science is twofold.

Firstly, to assess the progress of the PhD candidates. As it is well-known, all the graduate students enrolled in the PhD Program must present a paper or report each year to track the progress of their work.

Secondly, the workshop is devised for providing some useful guidelines for researchers. In particular, the workshop includes five methodological sessions, three devoted to discuss strategies for research and two for presenting tools and recent advances in econometric and statistical techniques.

Courses are open to students belonging to other PhD programs at the University of Huelva.
