

Bachelor in Mechanical Engineering

Course information

Year 2019-20

GENERAL SPECIFICATIONS				
English name				
Physics II				
Spanish name				
Física II				
Code		Type		
606410107		Compulsory		
Time distribution				
	Total	In class	Out class	
Working hours	100	30	70	
ECTS: 6				
Standard group	Small groups			
	Classroom	Lab	Practices	Computer classroom
4,14	0,36	1.5		0
Departments		Knowledge areas		
Ciencias Integradas		Física Aplicada		
Year		Semester		
1º		2º		

TEACHING STAFF			
Name	E-Mail	Telephone	Office
Mario E. Gomez Santamaria	mario.gomez@dfa.uhu.es	959219782	EX-P3-N1.10
Jose Rodriguez Quintero	Jose.rodriguez@dfaie.uhu.es	959219787	EX-P4-N1.10
Sánchez Benítez, Ángel Miguel (Spanish Course Coordinator)	angel.sanchez@dfaie.uhu.es	959219799	EX P3- N1-08

SPECIFIC INFORMATION OF THE COURSE
1. Contents description
1.1. In English:
Electrostatics - Electrical Circuits - Magnetostatics - Magnetic Induction - Thermodynamics
1.2. In Spanish
Campo eléctrico. Corriente eléctrica. Campo magnético. Inducción electromagnética. Termodinámica.
2. Background
2.1. Situation within the Degree:
The course is offered the second semester of the first year. It is a continuation of the course Physics I, offered the first semester. Also, it is related to the first year courses

Mathematics I and II.
2.2. Recommendations:
It is highly recommended to have taken previous courses in Physics and Mathematics at the High School level
3. Objectives (as result of teaching):
<p>The fundamental objective in that the student learns the basic concepts on the electromagnetic theory and acquires the skills to apply them in the understanding and solving engineering problems. Other objectives are:</p> <ol style="list-style-type: none"> 1. To understand the basics concepts and theories of Physics. 2. To apply Physics laws to solve problems. 3. To get familiar with the scientific language: Graphics, mathematical language ... 4. Ability to search for bibliography. 5. To get introduce in the experimental techniques. 6. Capability for team work.

4. Skills to be acquired
4.1. Specific Skills:
B02 Understanding of the basic concepts on the general laws of the mechanics, thermodynamics, field theory, waves and electromagnetism, along with their application to the resolution of the engineering problems
4.2. General Skills:
<p>CB1: Ability of the students to acquire knowledge and understand topics previously studied in high school, that in the course are presented with a higher level, including concepts at the research level.</p> <p>CB2: Ability of the students to apply their knowledge to their work and use the skills needed to become good professionals on their field by using accurate argumentation techniques and problem-solving skills.</p> <p>CB3: Ability of the students to gather information and perform an accurate interpretation of the data to be able to make precise judgements on social, scientific or ethical topics.</p> <p>G01: Ability to solve problems.</p> <p>G04: Ability to apply theoretical concepts to practical situations.</p> <p>G07: Capability for analysis and synthesis.</p> <p>CT2: Development of critical attitude towards the analysis and synthesis of knowledge.</p> <p>CT3: Development of attitude for continuous inquiring on the advance of the acquired knowledge.</p>

5. Training Activities and Teaching Methods
--

5.1. Training Activities:

- Lectures on the contents of the program.
- Laboratory sessions.
- Individual and group tutoring.

5.2. Teaching Methods:

- Master classes, encouraging student participation.
- Group work in lab sessions.
- Follow up of the understanding of the course contents in problem sessions.
- Individual tutoring.
- Elaboration and presentation of projects related to the contents of the course.
- Written exams.

5.3. Development and Justification:

Master class: Exposition of the theoretical contents of the course.

Problems and exercises: Application of the theoretical concepts. The ability to solve problems determines the understanding of the theory.

Laboratory sessions: the students will perform experiments that are related to the contents of the course. They will have to work in small groups aim to check physical laws and concepts.

6. Detailed Contents:

1 ELECTRIC CHARGE AND ELECTRIC FIELD.

- 1.1 Electric Charge.
- 1.2 Conductors, Insulators, and Induced Charges.
- 1.3 Coulomb's Law.
- 1.4 Electric Field and Electric Forces.
- 1.5 Electric-Field Calculations.
- 1.6 Electric Field Lines.
- 1.7 Electric Dipoles.

2 GAUSS'S LAW.

- 2.1 Charge and Electric Flux
- 2.2 Calculating Electric Flux.
- 2.3 Gauss's Law.
- 2.4 Applications of Gauss's Law.
- 2.5 Charges on Conductors

3 ELECTRIC POTENTIAL.

- 3.1 Electric Potential Energy.
- 3.2 Electric Potential.
- 3.3 Calculating Electric Potential.
- 3.4 Equipotential Surfaces.
- 3.5 Potential Gradient

4 CAPACITANCE AND DIELECTRICS.

- 4.1 Capacitors and Capacitance.
- 4.2 Capacitors in Series and Parallel.
- 4.3 Energy Storage in Capacitors.
- 4.4 Dielectrics.

5 CURRENT, RESISTANCE, AND ELECTROMOTIVE FORCE.

- 5.1 Current.
- 5.2 Resistivity.
- 5.3 Resistance.
- 5.4 Electromotive Force and Circuits.
- 5.5 Energy and Power in Electric Circuits.
- 5.6 Theory of Metallic Conduction.

6 DIRECT-CURRENT CIRCUITS.

- 6.1 Resistors in Series and Parallel.
- 6.2 Kirchhoff's Rules.

7 MAGNETIC FIELD AND MAGNETIC FORCES.

- 7.1 Magnetism.
- 7.2 Magnetic Field.
- 7.3 Magnetic Field Lines and Magnetic Flux.
- 7.4 Motion of Charged Particles in a Magnetic Field.
- 7.5 Applications of Motion of Charged Particles.
- 7.6 Magnetic Force on a Current-Carrying Conductor.
- 7.7 Force and Torque on a Current Loop.
- 7.8 The Direct-Current Motor.

8 SOURCES OF MAGNETIC FIELD.

- 8.1 Magnetic Field of a Moving Charge
- 8.2 Magnetic Field of a Current Element
- 8.3 Magnetic Field of a Straight Current-Carrying Conductor.
- 8.4 Force Between Parallel Conductors
- 8.5 Magnetic Field of a Circular Current Loop.
- 8.6 Ampere's Law
- 8.7 Ampere's Law Applications.

9 ELECTROMAGNETIC INDUCTION.

- 9.1 Induction Experiments.
- 9.2 Faraday's Law.
- 9.3 Lenz's Law
- 9.4 Motional Electromotive Force.
- 9.5 Induced Electric Fields.
- 9.6 Eddy Currents.
- 9.7 Displacement Current and Maxwell's Equations. 9.8 Mutual Inductance.
- 9.9 Self-Inductance and Inductors.

10 ELECTROMAGNETIC WAVES

- 10.1 Maxwell's Equations and Electromagnetic Waves.
- 10.2 Plane Electromagnetic Waves and the Speed of Light.
- 10.3 Sinusoidal Electromagnetic Waves.
- 10.4 Energy and Momentum in Electromagnetic Waves.
- 10.5 Standing Electromagnetic Waves

11 THERMODYNAMICS.

- 11.1 Introduction.
- 11.2 The zero principle and calorimetry.
- 11.3 First law.
- 11.4 Second law.

7. Bibliography

7.1. Basic Bibliography

F. W. Sears, M. W. Zemansky y H. D. Young, University Physics 13th Edicion. Ed. Addison- Wesley(2012).

7.2. Additional Bibliography:

There are many general physics manuals, some examples are:

P.A. Tipler & G. Mosca, Physics for Scientists and Engineers, 6th Edition, Freeman, W. H. & Company (2007)

R. A. Serway. Physics, Ed. McGraw-Hill (1985).

R. Resnick, D. Halliday y K. S. Krane, Physics, Ed. CECS (1994).

8. Systems and Assessment Criteria

8.1. System for Assessment:

- Written exam on theory and problems.
- Lab reports.
- Individual follow up of the student (Homework assignments, personalized tutoring).
- Lab exam.

8.2. Assessment Criteria and Marks:

- Written exam (70%). Evaluation of skills B02, CB1, CB2, G01, G04, G07 and TC2.
- Laboratory Mark (20% of the total grade). Report on laboratory experiments and an exam. Evaluation of skills CB3, G01, G02, G04, G07 and CT3.
- Homework and solution of problems in class (10%). Evaluation of skills B02, CB1, CB2, G01, G04, G07 and CT2.

NOTE 1: The homework grade will only be considered for students that obtain more than 40% of the grade of the written exam.

NOTE 2: The students must achieve more than the 40% in both the theoretical and the laboratory parts of the course to obtain a passing grade.

NOTE 3: The students can have the option of a unique evaluation. In this case a exam will be provided combining theoretical and practical questions. They must pass the theoretical part evaluating the skills B02, CB1, CB2, G01, G04, G07 and CT2 (80% of the grade). In addition, they will need to answer some questions related to the lab sessions evaluating skills CB3, G01, G02, G04, G07 and CT3 (20% of the grade). Students who choose the unique evaluation system must notify to the professor via e-mail during the first two weeks of the course, or not later than two weeks after coming to class in case of late registration. The decision of the unique evaluation implies to renounce to the regular evaluation system. Switching between the two systems is not allowed.
